

Coronavirus SARS-CoV-2

Information and practical advice

Englisch

Act safely and respectfully!

- We must show discipline and act in solidarity. This will help protect your health and slow down the spread of the virus.
- Only trust information sources that are accurate and reliable.
- Also refer to the latest information from the WHO.
The WHO offers current and reliable information, some of it also available in a range of languages.
- In Germany, you can obtain current and reliable information from the Robert Koch-Institute (RKI), the Federal Center for Health Education (Bundeszentrale für gesundheitliche Aufklärung, BZgA) or the Ministry of Health (Bundesministerium für Gesundheit, BMG).
- Please also consider your actions in order to protect the health of medical and care personnel.
They are the heroines and heroes who are risking their own health to care for us.
- Those infected or ill must under all circumstances comply with the instructions of medical and care personnel.
- Please make sure you also comply with all the latest instructions, appeals and notices from government, national and local health authorities, as well as the security forces.

How can I best protect myself?

The following main protective measures are simple and very effective! Protective hygiene rules when coughing or sneezing, hand washing and keeping a distance should become habitual. Also educate your family, friends and acquaintances about these protection measures.

Protective hygiene rules when coughing or sneezing

- When coughing or sneezing, keep a distance of at least 1.5 meters from other people and turn away from them.
- Cough or sneeze into a facial tissue. Use the tissue only once. Dispose of tissues in a rubbish bin with a lid.
- If there are no tissues available, hold the crook of your arm (not your hand!) in front of your mouth and nose when coughing or sneezing.
- If you have had visitors, open the windows wide and air the room for 5 minutes.

Hand washing

- Wash your hands often and thoroughly with soap, including the spaces between your fingers and the fingertips. Ideally for half a minute and using liquid soap. Rinse your hands under running water.
- Dry your hands carefully, including between your fingers. At home, everyone should use their own towel. In public toilets, it is best to use disposable towels. In public toilets, close the tap with a disposable towel or use your elbow.

Keeping a distance

- Avoid close contact such as shaking hands, kissing and hugging. You are not being rude; you are merely protecting yourself and others.
- If you are sick, stay at home to recover and to prevent spreading infections.
- Even people who are infected but do not show any symptoms of the disease can infect others. Keep a distance of at least 1.5 meters to avoid the direct transmission of infections.
- Those who are sick should stay away from particularly vulnerable individuals, such as older people or those with pre-existing health conditions.

Important facts about the coronavirus

The novel coronavirus is now spreading globally. It is transmitted by droplet or smear infection. This can happen from person to person via the mucous membranes, or indirectly via the hands. This is because the hands can come in contact with the mucous membranes of the mouth, the nose or the eyes, and so make the transmission of the virus possible.

The virus causes a respiratory infection. Apart from cases of mild illness, symptoms that may occur include fever, cough, breathing difficulties or shortness of breath, as well as headache and muscle soreness.

In severe cases, pneumonia may develop.

Older people and those with a chronic illness are especially at risk. In most cases, symptoms are markedly milder among children. At this time, it is assumed that up to 14 days may pass between infection and the onset of symptoms.

Only a laboratory test can confirm whether a person has been infected with the novel coronavirus.

Have I got the coronavirus?

If you are arriving from a risk area, if you notice you are having symptoms, or if you had contact with a person who has been confirmed to have the new coronavirus:

- **If you have symptoms, please call your doctor.**
If she/he is unavailable, please contact the on-call medical service by dialling 116 117.
In an emergency, please call 112.
- **If you had contact with an infected person, but don't have symptoms yourself, or if you have returned from a risk area, please inform your local public health authority (Gesundheitsamt)*.**
- **Tell the doctor if you have, for example, existing conditions such as high blood pressure, diabetes, cardiovascular disease, chronic respiratory illness, or if you have a disease or are taking a treatment that lowers the immune system.**
- **Find out who to contact and what precautions you have to take so that you don't infect others.**
- **Please do not go to your doctor's practice without making an appointment. This way you are protecting yourself and others!**
- **Avoid unnecessary contact with other people and stay at home as much as possible.**

Is there a vaccine?

There is not yet a vaccine against the novel coronavirus. Every effort is being made to make a vaccine available.

Do other vaccinations help?

Vaccinations against other respiratory diseases do not protect against the novel coronavirus.

However, they can prevent other respiratory infections (influenza, pneumococcal pneumonia) and thus contribute to reducing the burden on the health system.

Are imported goods contagious?

There is no known risk from goods, mail items or luggage. Objects in the immediate vicinity of sick people must be kept clean.

Is wearing a medical mask necessary?

There isn't sufficient evidence that mouth and nose protection fundamentally reduces the risk of infection in healthy people. It is much more important that protective hygiene recommendations are observed, e.g. when coughing and sneezing, and for hand washing.

Those who are infected can use a medical mask or breathing mask to reduce the risk of infecting others.

Important: change the mask when it has become damp. Masks that get damp quickly do not provide a barrier to viruses.

Is it necessary to use disinfectants?

Regular and thorough hand washing usually provides effective protection against infection. If the people around you are particularly susceptible to infection, hand disinfection may be sensible.

* You can find your local public health authority at www.rki.de/mein-gesundheitsamt

If you have symptoms, contact your doctor.

If unavailable, contact the on-call medical service.

It is available throughout Germany by dialling

116 117, including at night, at weekends and on public holidays.

When are quarantine measures necessary?

If you have been confirmed to have coronavirus infection.
If you had close contact with someone who is infected.
If the respective authority orders you to be quarantined.

How long does quarantine last?

If the illness is mild, quarantine currently lasts for two weeks in most cases. You must stay at home during this time. This also applies to individuals who were in close contact with the person who is ill.

Two weeks also corresponds to the time from possible infection with the novel coronavirus SARS-CoV-2 until the onset of symptoms or confirmation of the virus in a throat swab.

If quarantine is imposed, you will be informed by the health authority about what to do if, for example, symptoms appear. Such as whether you need to check your body temperature, or when quarantine will be lifted.

What should I keep in mind when quarantined at home?

- Avoid close contact with others in your household.
- Ask family members, acquaintances or friends for help with shopping, which should then be left outside your door.
- Make sure to air your apartment or house regularly.
- Cutlery, crockery and personal hygiene items should not be shared with other family members or people living in the household. Utensils and dishes must be washed regularly and thoroughly. This also applies to clothing.
- Contact your general practitioner or specialist if you urgently need medication or medical treatment.
- Inform your doctor if you have a cough, runny nose, shortness of breath or fever.
- Contact local support services if you need help looking after your children.

What should I watch out for in a shared accommodation facility?

Have you arrived from a risk area, are you noticing that you are having symptoms, or have you had contact with a person who has been confirmed to have coronavirus? If you live in a shared accommodation facility, let management or social services know. Also inform your school, language school, the place where you are being trained or work etc.

Where can I find further information?

Your local public health authority

offers assistance. You can find the telephone number at:
www.rki.de/mein-gesundheitsamt

The Federal Ministry of Health (BMG)

offers centrally collated information about the novel coronavirus at:

www.zusammengegencorona.de

Citizen's Services Line: 030 346 465 100

Advice for people with hearing loss:

Fax: 030 340 60 66-07, info.deaf@bmg.bund.de

info.gehoerlos@bmg.bund.de

Sign language video telephone:
